

ADVANCE DEVOPS EXP 5

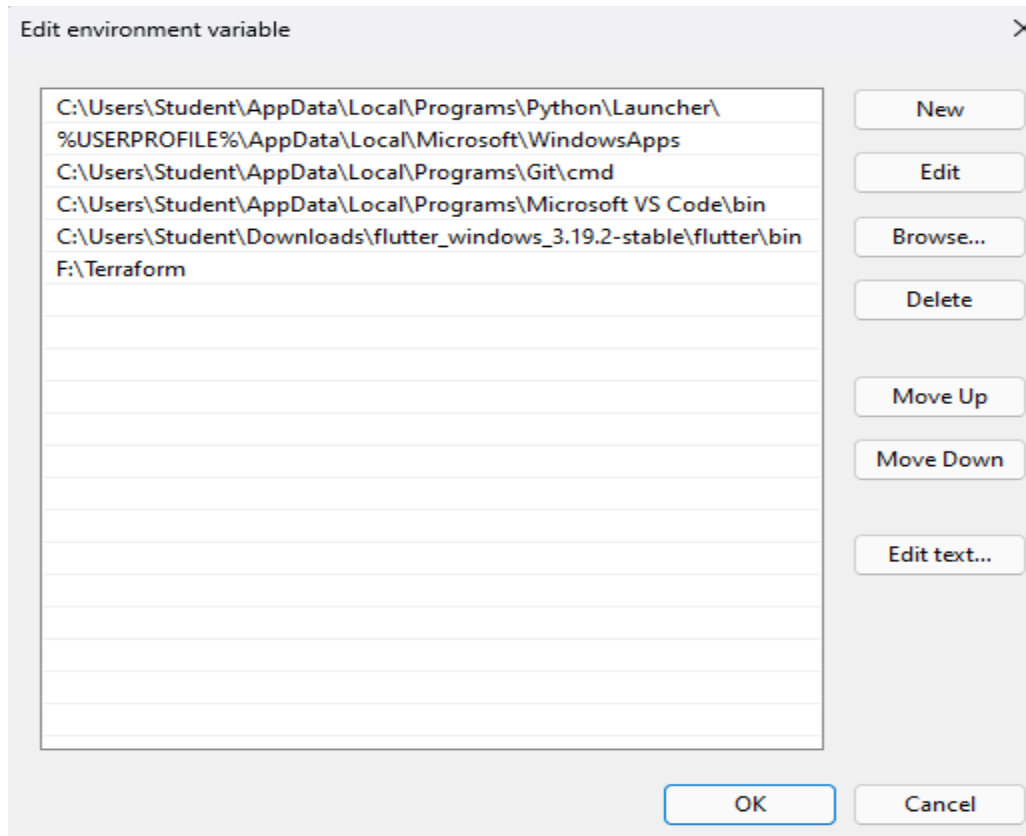

ANSH SARFARE

D15A/50

Aim: To understand Terraform lifecycle ,core /concepts terminologies and install it on a Linux Machine and Windows

The screenshot shows the Terraform website's installation page. The left sidebar contains navigation links: Terraform Home, Install Terraform, Operating Systems (macOS, Windows, Linux, FreeBSD, OpenBSD, Solaris), and Release information. The main content area displays a terminal snippet for macOS installation: `brew tap hashicorp/tap` and `brew install hashicorp/tap/terraform`. Below this, there are sections for 'Binary download' for AMD64 and ARM64 architectures, each with a 'Download' button. A 'Windows' section follows, also showing 'Binary download' for 386 and AMD64 architectures with 'Download' buttons.

The screenshot shows a Windows file explorer window titled 'terraform_1.9.4_windows_386.zip (evaluation copy)'. The window displays the contents of the ZIP archive, which includes a file named 'terraform.exe' (Application, 86,264,496 bytes) and a file named 'LICENSE.txt' (Text Document, 4,922 bytes). The file explorer interface includes a top menu bar with 'File', 'Commands', 'Tools', 'Favorites', 'Options', and 'Help'. The bottom status bar shows 'Selected 1 file, 86,264,496 bytes' and 'Total 2 files, 86,269,418 bytes'.

```
PS F:\> terraform
Usage: terraform [global options] <subcommand> [args]

The available commands for execution are listed below.
The primary workflow commands are given first, followed by
less common or more advanced commands.

Main commands:
  init          Prepare your working directory for other commands
  validate      Check whether the configuration is valid
  plan          Show changes required by the current configuration
  apply         Create or update infrastructure
  destroy       Destroy previously-created infrastructure

All other commands:
  console       Try Terraform expressions at an interactive command prompt
  fmt           Reformat your configuration in the standard style
  force-unlock  Release a stuck lock on the current workspace
  get           Install or upgrade remote Terraform modules
  graph         Generate a Graphviz graph of the steps in an operation
  import        Associate existing infrastructure with a Terraform resource
  login         Obtain and save credentials for a remote host
  logout        Remove locally-stored credentials for a remote host
  output        Show output values from your root module
  providers     Show the providers required for this configuration
  refresh       Update the state to match remote systems
  show          Show the current state or a saved plan
  state         Advanced state management
  taint         Mark a resource instance as not fully functional
  test          Experimental support for module integration testing
  untaint       Remove the 'tainted' state from a resource instance
  version       Show the current Terraform version
  workspace     Workspace management
```
